Virus Simulation End User Documentation

Currently Supported Platforms: Windows XP and Higher, Mac OSX

Download Respective Build for either Windows or Mac OS from Builds Folder

Instructions for Windows Users:

1. Download built .exe file along with data folder. These must be in the same directory to run.
2. Run .exe
3. Select configuration options for optimal performance on your machine.
4. Main menu will appear. Begin button will begin the simulation, and the help button will provide a help menu.
5. W or Right click will add force equivalent to distance from mouse cursor to player object. Turn by moving mouse.
6. Infect people by clicking on them when within 5 meters range.
7. Infected people will infect others.
8. Kill them all as fast as you can!

Instructions for Mac OS Users:

1. Download built project file for Mac OS.
2. Run built file.
3. Select configuration options for optimal performance on your machine.
4. Main menu will appear. Begin button will begin the simulation, and the help button will provide a help menu.
5. W or Right click will add force equivalent to distance from mouse cursor to player object. Turn by moving mouse.
6. Infect people by clicking on them when within 5 meters range.
7. Infected people will infect others.
8. Kill them all as fast as you can!
9.
